

**Amendments to the Specification:**

1. Please amend the paragraph 0005 (page 3) of the specification as indicated:

[0005] In order to achieve the aforementioned object, in ~~a first~~ an aspect of the invention ~~as disclosed in claim 1~~, a content administration system is provided with content administration information storage means for storing individual content administration information for every item of user identification information, icon image storage means for storing icon images, communicating means for communicating with an external terminal device via the Internet, and information processing means for controlling operation of each means. Here, the content administration information storage means stores object path information identifying an object storage location and sharing permission information indicating whether the object may be utilized by other users. The content administration system then carries out the following processing. The processing means receives user identification information from the terminal device via the Internet. The processing means then specifies content administration information storage means corresponding to the received user identification information. Next, the processing means acquires object path information correlated to the sharing permission information from content administration information storage means of another unspecified user. The processing means then acquires an icon image from the icon image storage means. The processing means makes display control information for the content administration screen containing the icon leading to the object based on the acquired icon image and the acquired object path information. The processing means then transmits the made display control information to the terminal device via the Internet.

2. Please amend the paragraph 0008 (page 3) of the specification as indicated:

[0008] ~~The~~ In another aspect, the content administration system ~~as disclosed in claim 2 of the invention~~ comprises icon image storage means for storing icon images, communicating means for communicating with an external terminal device via the Internet and information processing means for controlling operation of each means. The content administration system then carries out the following processing. The processing means acquires object path

information identifying a storage location of an object at another server device from the terminal device via the Internet, The processing means then acquires an icon image from the icon image storage means. The processing means makes display control information for the content administration screen containing the icon leading to the object based on the acquired icon image and the acquired object path information. The processing means then transmits the made display control information to the terminal device via the Internet.

3. Please amend the paragraph 0010 (page 3) of the specification as indicated:

[0010] In ~~the another~~ aspect of the invention ~~as disclosed in claim 3~~, the processing means of the content administration system ~~disclosed in claim 2~~ executes the following processing. The processing means receives an upload request from the terminal device. Further, the processing means receives files stored with object path information saved at the desktop of the terminal device based on the received upload request. The processing means acquires the object path information from the received file.

4. Please amend the paragraph 0012 (page 3) of the specification as indicated:

[0012] In ~~the another~~ aspect of the invention ~~as disclosed in claim 4~~, the processing means of the content administration system ~~disclosed in claim 2~~ executes the following processing. The processing means receives an upload request from the terminal device. Receiving a cached file of a web browser of the terminal device storing the object path information based on the received upload request. Acquiring the object path information from the received cached file.

5. Please amend the paragraph 0014 (page 4) of the specification as indicated:

[0014] ~~The in another aspect, the~~ content administration system ~~as disclosed in claim 5 of the invention~~ comprises icon image storage means for storing icon images, communicating means for communicating with an external server device or terminal device via the Internet, and information processing means for controlling operation of each means. The content

administration system then carries out the following processing. The processing means acquires object path information identifying a storage location of an object administered by the external server device from the external server device. The processing means then acquires an icon image from the icon image storage means. The processing means makes display control information for the content administration screen containing the icon leading to the object based on the acquired icon image and the acquired object path information. The processing means then transmits the made display control information to the external terminal device via the Internet.

6. Please amend the paragraph 0016 (page 4) of the specification as indicated:

[0016] In ~~the~~ another aspect of the invention ~~as disclosed in claim 6~~, the processing means of the content administration system ~~disclosed in claim 5~~ executes the following processing. The processing means acquires the object path information from the external server device using socket communication between server devices.
